Course description

Content	This course addresses decision making in an environmental context. The course will provide an overview on how humans make decisions by taking into account insights from psychology, behavioral/experimental economics, sociology game theory and neuroeconomics.
Previous Knowledge Expected	No previous knowledge expected. Please note that this is a master level course.
Objective (Expected Results of Study and Acquired Competences)	Participants will acquire a basic understanding of human decision making (decision making of consumers, households and organisations) and apply it to environmental issues. By this means participants will be able to add a psychological/behavioural perspective to the analysis of (un)sustainable / environmentally significant behaviours.
Languages of Instruction	English
Teaching and Learning Method (Transfer of Skills)	interactive (e.g. seminar, course: conveying knowledge by presentations, discussions etc.) Lectures by instructor; study of literature, student presentations, composing a hand-out, discussions.
Workload for Students

Many examples of how behaviours can be moved to more desirable patterns by applying slight and subtle measures.
 - 2) Gerd Gigerenzer: Gut Feelings: The Intelligence of the Unconscious (German title: "Bauchentscheidungen").
German psychologist Gerd Gigerenzer is pre-eminent in the field of heuristics. I recommend to read his book if you believe that elaborating on hard decisions *always* leads to better outcomes than simply listening to gut feelings. Gigerenzer illustrates and explains heuristics we unconsciously - and under certain circumstances successfully - rely on.

Course description

Content	What is waste? Definition always depend on the context. Still, it remains a fact that industrial societies produce enormous quantities of waste. Yet, waste can also be the basis of human subsistence and a valued resource, and not just in the so called Global South. But living from waste and living with waste can also be a social stigma; ranging from working at garbage disposal to collecting recycling material in order to make a living. At the same time, people discover waste products as a new resource: dumpster divers find their food in rubbish bins, curb shoppers furnish their flats with discarded furniture, free stores hand out goods and commodities that their previous owners disposed of, and a whole range of new business ideas develop around upcycling and urban mining. Avoiding waste altogether is equally increasing as a trend, with zero-waste shops, cradle-to-cradle, and blogs and books promoting the zero-waste lifestyle. In this sense, waste also opens up new possibilities for people. In this course we will take a closer look at the norms defining waste, and investigate people's relationship with waste, in Europe and beyond.
